The Jersey RESTful web services framework is the reference implementation for the JAX-RS specification. It was originally developed by Sun, passed on to Oracle, and currently resides with the Eclipse foundation (Eclipse Jersey). Jersey is available standalone or as part of the Glassfish application server.

Best practices for RESTful APIs REST APIs use standard HTTP verbs for Create, Retrieve, Update, and Delete (CRUD) operations, with special attention that is paid to whether the operation is idempotent (safe to retry multiple times). POST operations can be used to create resources.

POST operations can't be invoked repeatedly.

## **Creating RESTful microservices**

Some Java frameworks, such as Jersey (JAX-RS) and Restlet, are designed for Restful services.

Nonetheless, the HttpServlet on its own provides a lightweight, flexible, powerful, and well-tested API for delivering such services. I'll demonstrate this with the novels example. Deploy the novels web service

SOAP versus RESTful microservices. SOAP and RESTful microservices have the following differences:

SOAP:	RESTful microservices:
An XML-based message protocol.	An architectural style.
Uses WSDL for communication between the consumer and the provider.	Use XML or JSON to send and receive data.
Invokes services by calling the RPC method.	Simply call services via the URL path.
The transfer is over ...

I thought I knew what REST/"RESTFul", restfulservices, webservices, SOA and microservices I'd say that all these terms fall into the umbrella of Service Oriented Architectures (SOA). Web services is a SOA using web-related technologies. REST and its subset RESTful are a set of practices to implement web services.
